Phase contrast microscopy of cervicovaginal discharge	09
CHAPTER 01 Introduction	11
CHAPTER 02 Phase-contrast microscopy	15
2.1 Advantages and disadvantages	15
2.2 Physics, tuning, and set-up of the phase contrast microscope	15
2.2.1 The Köhler illumination principle	16
2.2.2 Cleaning of the microscope	17
CHAPTER 03 Preparation of a vaginal wet mount slide	19
3.1 Cells in the wet mount preparation of (cervico-)vaginal discharge	19
3.1.1 Vaginal epithelial cells	19
3.1.2 Endometrial epithelial cells	20
3.1.3 Non-epithelial cells	20
CHAPTER 04 Diagnostic criteria	21
4.1 How to diagnose bacterial vaginosis?	21
4.2 How to diagnose aerobic vaginitis/desquamative inflammatory vaginitis?	21
4.3 Future promising diagnostic tools	21
CHAPTER 05 Clinical and microscopic examples	25
5.1 Normal findings	25
5.2 Cytolytic vaginosis	30
5.3 Atrophy	31
5.4 Bacterial vaginosis/dysbiosis	32
5.5 Candida vaginitis	35
5.6 Trichomoniasis	41
5.7 Aerobic vaginitis (AV)/desquamative inflammatory vaginitis (DIV)	42
5.8 Diverse	44
References	49

PHASE CONTRAST MICROSCOPY OF CERVICOVAGINAL DISCHARGE

Werner Mendling

German Center for Infections in Gynecology and Obstetrics, Wuppertal, Germany

Caroline Oliveira

Federal University Fluminense, Rio de Janeiro, Brazil

Svitrigailė Grinceviciene

Institute of Biotechnology, Department of Biothermodynamics and Drug Design, Life Sciences Center, Vilnius University, Vilnius, Lithuania

Francesco de Seta

Department of Obstetrics and Gynecology, IRCCS San Raffaele Scientific Institute, University Vita and Salute, 20132 Milan, Italy

Colleen K. Stockdale

University of Iowa Healthcare, Iowa City, Iowa, USA

Hans Verstraelen

Ghent University and Ghent University Hospital, Ghent, Belgium

Pedro Vieira-Baptista

Hospital Lusíadas Porto, Porto, Portugal

Department of Gynecology–Obstetrics and Pediatrics, Faculdade de Medicina da Universidade do Porto, Porto, Portugal

Ghent University, Ghent, Belgium
